**Hiring Manager**

Oracle

Trivandrum, Kerala, India

Dear Hiring Manager,

I am excited to apply for the “Software Engineer/Member” position at Oracle. With 3 years of experience as a full stack software developer specializing in React, Next.js, Go, and SQL, I have a strong technical foundation and a deep commitment to creating robust, scalable software solutions. Oracle’s commitment to innovation and its impact on enterprise-level solutions make this opportunity particularly appealing, as I am eager to contribute my skills to an organization at the forefront of the technology industry.

In my current role as a Software Engineer at Axeno Consulting, I’ve developed user-focused, performance-driven applications. For example, I recently led the development of a Form Builder application, leveraging React, Redux, and Material-UI to create an efficient, scalable interface. This project improved customization efficiency by 40% and involved collaborating with cross-functional teams, optimizing SQL-based backend performance, and integrating open-source libraries. My experience with both frontend and backend technologies equips me to work seamlessly across the stack, a quality I believe aligns well with Oracle's standards for software excellence.

My technical expertise also includes implementing complex backend infrastructure using Go and deploying cloud-based applications on platforms like Railway and Vercel. This experience has strengthened my skills in API design, RESTful service integration, and database optimization. I am comfortable working with large-scale datasets and ensuring data integrity across cloud environments—an asset for contributing to Oracle’s data-driven solutions.

I am confident that my dedication to innovation and my technical background would make me a valuable asset to Oracle’s team. Thank you for considering my application. I look forward to the opportunity to further discuss how my experience and skills align with Oracle’s mission and goals.

Sincerely

Deepak Sharma
